ABSTRACTED-PUB-NO: TW 433990A

BASIC-ABSTRACT:

NOVELTY - This invention describes the manufacture method and structure of a stirring tool. The stirring tool with a rod part and a handler part is made from basic material first. A syrup is obtained through heating up sugar and the rod part of the tool is inserted into the container full of hot syrup. The tool is removed from the container with its rod part coated with syrup. The rod part with syrup of the tool is then placed into a container of sugar crystals to allow the syrup being covered with sugar crystals. The final product is obtained once the syrup on the rod part of the tool is dried, solidified and packaged.
